Recommended Research Databases and Scholarly Resources

Students are encouraged to use reputable scholarly databases, publisher platforms, and academic search tools when conducting the review of related literature and studies.

A. Major IT, Computer Science, and Engineering Databases

1. IEEE Xplore Digital Library
Publisher: Institute of Electrical and Electronics Engineers (IEEE)
Focus: Computer science, information technology, artificial intelligence, machine learning, networks, cybersecurity, electronics, engineering, and emerging technologies.
Official Link: IEEE Xplore Digital Library

2. ACM Digital Library
Publisher: Association for Computing Machinery (ACM)
Focus: Computer science, software engineering, artificial intelligence, algorithms, databases, cybersecurity, human-computer interaction, and computing research.
Official Link: ACM Digital Library

3. ScienceDirect
Publisher: Elsevier
Focus: Computer science, information systems, engineering, data science, artificial intelligence, and multidisciplinary scientific research.
Official Link: ScienceDirect

4. SpringerLink
Publisher: Springer Nature
Focus: Computer science, information systems, artificial intelligence, software engineering, data analytics, and applied technologies.
Official Link: SpringerLink

5. Wiley Online Library
Publisher: Wiley
Focus: Information systems, computer science, data science, machine learning, networking, engineering, and multidisciplinary research.
Official Link: Wiley Online Library

6. Taylor & Francis Online
Publisher: Taylor & Francis
Focus: Information and communication technologies, computing, data analytics, information

systems, engineering, and interdisciplinary research.
Official Link: Taylor & Francis Online

7. MDPI
Publisher: Multidisciplinary Digital Publishing Institute
Focus: Open-access research in computer science, information technology, electronics, sensors, artificial intelligence, data science, and related fields. Relevant journals include *Information*, *Algorithms*, *Electronics*, and *Sensors*.
Official Link: MDPI

8. IGI Global Scientific Publishing
Focus: Information technology, information systems, computer science, artificial intelligence, educational technology, cybersecurity, and emerging technologies.
Official Link: IGI Global

9. Bentham Science
Focus: Peer-reviewed journals and books in computer science, engineering, technology, and multidisciplinary research.
Official Link: Bentham Science

B. Citation and Indexing Databases

10. Scopus
Provider: Elsevier
Purpose: Abstract and citation database used to locate scholarly literature, track citations, identify authors and journals, and verify journal indexing. Full-text articles may be accessed through the original publisher or institutional subscription.
Official Link: Scopus

11. Web of Science
Provider: Clarivate
Purpose: Citation and indexing database for peer-reviewed scholarly publications across multiple disciplines. Useful for citation tracking and identifying influential research.
Official Link: Web of Science

12. DBLP Computer Science Bibliography
Focus: A specialized bibliographic resource for Computer Science covering major journals, conference proceedings, authors, and publications. Particularly useful for identifying CS conference papers. (DBLP)
Official Link: DBLP Computer Science Bibliography

C. Academic Search and Research Discovery Tools

13. Google Scholar
Purpose: Broad academic search engine for journal articles, conference papers, theses, books, and scholarly publications.
Official Link: Google Scholar

14. Semantic Scholar
Purpose: Free AI-powered academic search and discovery tool that helps researchers locate and explore related scholarly literature. (Semantic Scholar)
Official Link: Semantic Scholar

D. Open-Access and Preprint Resources

15. arXiv
Focus: Open-access preprints in computer science, artificial intelligence, machine learning, mathematics, statistics, and related disciplines.
Official Link: arXiv

16. CORE
Purpose: Aggregates open-access research papers from repositories and journals worldwide and provides access to a large collection of scholarly literature. (CORE)
Official Link: CORE

17. DOAJ – Directory of Open Access Journals
Purpose: Directory and index of peer-reviewed open-access journals and articles from around the world. (Directory of Open Access Journals)
Official Link: DOAJ

18. ResearchGate
Purpose: Academic networking and research-sharing platform where researchers may share publications, preprints, and other scholarly outputs. Students should verify the final published version through the journal or publisher whenever possible.
Official Link: ResearchGate

E. Institutional and Research Support Resources

19. BatStateU Library
Students are encouraged to maximize the University's subscribed databases, electronic journals, books, theses, and other academic resources.
Official Link: BatStateU Library

20. Mendeley
Purpose: Reference management, citation organization, and bibliography generation.
Official Link: Mendeley

21. Zotero
Purpose: Free reference management tool for collecting, organizing, citing, and managing research sources.
Official Link: Zotero

22. Turnitin
Purpose: Similarity checking and support for academic integrity in research writing.
Official Link: Turnitin

Important Reminder

Students should prioritize **peer-reviewed journal articles and reputable conference proceedings** relevant to their research topic. The use of a database or search engine does not automatically guarantee the quality of a source. Students are expected to evaluate the **relevance, credibility, publication venue, peer-review status, recency, and indexing** of the literature they use.

Preprints from platforms such as **arXiv** may be useful for identifying recent developments, but students should determine whether a peer-reviewed version of the work is already available before citing the preprint as a primary reference.

For **CS Thesis 1**, I especially recommend keeping **IEEE Xplore, ACM Digital Library, ScienceDirect, SpringerLink, Scopus, Web of Science, Google Scholar, DBLP, and BatStateU Library** prominent. DBLP is particularly useful for Computer Science because it specifically curates major CS journals and conference proceedings. (DBLP)
